

The status and prospect for neutrino physics

Monday, 27 August 2018 14:30 (30 minutes)

The study of neutrino properties, especially those pertaining to neutrino masses and mixing, is among the most rapidly developing subjects in fundamental physics. Non-zero neutrino masses are the most palpable evidence of physics beyond the standard model and there are several current and future experiments poised to make new discoveries. I will present the current status of neutrino physics, emphasizing the open phenomenological and theoretical questions.

Presenter: Dr DE GOUVEA, Andre Luiz (Northwestern U.)

Session Classification: Plenary Session
