

A Vision for Neutrino Astronomy

Monday, 14 June 2021 08:20 (40 minutes)

From successes over the past decades, we know that neutrino astronomy is both possible and powerful. But now what? I review the frontiers of this field and present a vision for its future. Success will have wide implications for both physics and astronomy.

Presenter: BEACOM, John (Ohio State U.)

Session Classification: Plenary 1
