

Depleting or Producing Dark Matter

Wednesday, 16 June 2021 18:00 (40 minutes)

New ideas about the origin of dark matter are being driven by experimental progress. Increasingly powerful constraints from direct and indirect detection are leading to the exploration of new masses and interactions for dark matter. I will describe recent developments identifying novel mechanisms for the production of nonthermal dark matter or the depletion of thermal dark matter.

Presenter: RUDERMAN, Joshua (New York U./CCPP)

Session Classification: Plenary 6
