

“Sterile ν search at Underground” Mini-workshop

July 1 & 2, 2021

“This mini-workshop aims to find common interests and efforts on sterile neutrino search at underground using beam neutrinos.”

This time, we have not advertised our workshop widely.
With a more preparation, next time,
we will make our workshops more widely advertised.

- ❑ Next year,
we plan to have a “satellite” workshop at Yemilab
on sterile neutrino search before or after Neutrino 2022.
- ❑ I think this satellite workshop would be very interesting.
Let's hope we can have an **offline** workshop.

If you are interested in working on any topics on **LSC physics program** including **IsoDAR@Yemilab**, then let us know, please.

You are very welcome to join us.

Thanks much to
all speakers, attendees and session chairs !

“Neutrino 2022”

May 30 – June 04
