

## Flavor Leptogenesis during the reheating era

*Tuesday, 23 July 2024 11:35 (25 minutes)*

We show that the process of non-instantaneous reheating during the post-inflationary period can have a sizable impact on the charged lepton Yukawa equilibration temperature in the early Universe. This suggests relooking the effects of lepton flavors in the leptogenesis scenario where the production and decay of right-handed neutrinos take place within this prolonged era of reheating. We find this observation has the potential to shift the flavor regime(s) of leptogenesis compared to the standard thermal scenario.

**Presenter:** Dr DATTA, Arghyajit (Kyungpook NU)
